

# remoteSAPdevelopment

## Your Problem

**Skill shortages, travel issues, office restrictions, management edicts?** There are many reasons why you might be unable to accommodate onsite development for SAP. Whether it is across town, the other side of the world, or somewhere in between; at Exactitude we have recognized your problem, and we have an option to help you solve it: our Remote Development Package.

## Our Approach

Professional, committed, knowledgeable and flexible SAP skilled resources form the basis of our business. These attributes mean that remote development is not only feasible; it can also be the best, most cost effective option in many cases.

Exactitude has designed a service package that removes the barriers to remote development. The keys to success are preparation, precise specifications of requirements, accurate progress monitoring, a clear issue management system and above all our commitment to a quality result for our clients.

## Business Benefit

The ability to get interfaces, data conversions, reports and other complex developments done and tested to meet cost and time objectives is a critical success factor in most SAP projects. Remote development is one option that can enable you to meet your objectives without the concerns of accommodating and managing development people on site. Benefits it will offer include:

- Access to highly skilled specialists regardless of their location
- Eliminate travel time and cost issues
- Manage development "overflow" work
- Scalable from individual tasks to your entire development effort
- Reduce accommodation requirements and related on-costs
- Reduce the number of IT managed workstations
- More disciplined approach leading to better project management

With a history of SAP development work going back to 1990, we know the challenges and what is needed to be successful. We have developed a framework to extend this to remote development based on planning, clear specifications, careful selection of development people and an over-riding commitment to quality. With minimal overhead costs this approach is very scalable from complete project development teams right down to individual packages of work. Please contact us today to discuss how we can ensure the successful delivery of your developments that are so important to your business.
